My experience at UniTO

Paolo Pescarmona
Associate professor in Sustainable Chemical Products and Catalysis at the University of Groningen - The Netherlands

The experience as visiting professor at the University of Torino allowed me to take a new, stimulating challenge in my experience as a lecturer, as I had the opportunity to develop a course on ‘Chemistry, Equilibrium and Sustainability’ for the students attending the Scuola di Studi Superiori ‘Ferdinando Rossi’, who have very diverse backgrounds ranging from philosophy to physics.

My efforts to make the course interesting, accessible and yet scientifically rigorous were rewarded by the active participation and positive feedback by the students.
