My experience at UniTO

**Moritz Zaiss**
Project Leader CEST imaging at Max-Planck Institute for biological cybernetics in Tübingen, Germany

My visit in Torino brought me in contact to students as well as researchers from different research fields that actually need the methods I develop as a potential tool to solve their research questions. This was therefore inspiring and allowed me to understand better their point of view and also pushed me to explain better outside of my own circle.

Besides getting broader experience in teaching, Torino is perfect to broaden as well your experience in italian food, wine and gelato. This can be perfectly combined with scientific exchange with outstanding local colleagues with a realxed time frame compared to a scientfic meeting or conference.
